917

What is claimed is:

1. A small article case composed of a socket and a plug-in body to be inserted in said socket,

wherein said socket comprises a tubular body with a bottom having front and rear wall portions and opposing side wall portions, and a pair of engagement pawl attaching openings cut in arcs from said respective side wall portions to said front and rear wall portions are provided on the bottom side thereof; and

said plug-in body comprises a picking portion having a section larger than that of an insert hole of said socket, a small article mounting plate portion⁽²²⁾ elongated from said picking portion in the insertion direction of said socket, and a pair of elastic legs which are elongated in the insertion direction at a certain distance from and along at least a front end of said small article mounting plate portion and which have engagement pawls on the outside surfaces thereof.

2. A small article case according to claim 1, wherein said socket and said plug-in body are molded articles made of a synthetic resin material.

3. A small article case according to claim 1, wherein said small article case has a wall portion⁽²¹⁾ on a circumference of said small article mounting plate portion and a shape of a section comprising said small

article mounting plate portion and said wall portion is substantially equal to the section of said insert hole of said socket.

4. A small article case according to claim 1, wherein one of a guide ridge and a concave groove, which are elongated in the insertion direction of said plug-in body and which are capable of being fitted with each other, is formed on one of a rear surface of said small article mounting plate portion of said plug-in body and the inside face of any one of front and rear wall portions of said socket and the other of said guide ridge and said concave groove is formed on the other of said rear surface and said inside face.

5. A small article case according to claim 2, wherein at least one of said front and rear wall portions of said socket is formed by a transparent material.

6. A small article case according to claim 1, wherein a small article holding pocket in which a portion of the small article is inserted and which pinches and holds front and rear faces thereof is formed on said small article mounting plate portion of said plug-in body.

7. A small article case according to claim 1, comprising a strap attaching hole on at least one of said socket and the plug-in body.
